WATER CONSERVATION

Water conservation today is vital. We at eH2o Guarantee Water Conservation with our system!

Because our direct pulse powered water treatment is so effective for producing calcium carbonate crystals we are able to remove more hardness minerals than any other non chemical water treatment. This allows the water to stay in your system to reduce the dependency with blow down.

As water costs continue to rise, water conservation is an important attribute to our water treatment. The photo is a 4600 ton cooling tower that is enjoying an 80% savings in blow down. This is saving the owner millions of gallons of water.

We also have zero bleed systems that have been operating for 5-7 years.
