## HOT WATER SYSTEMS

Many non chemical water treatments are on the market for cooling towers and not heaters and boilers. It is important to understand that scaling tendencies are exacerbated at heat exchange surfaces. For many cooling tower applications, the scaling tendencies are not nearly as severe as you would have on a hot water system. It is important to know that the Tri-Tron used with eH2O water treatment is the product that is promoted and used by many manufacturers. The others have been tested and tried, and it is our technology of choice by the manufactures when it comes to unparalleled scale control on hot water systems.

Discover the water treatment that is in many Manufacturers hand books and literature!
